

SLEWING BEARINGS

WJB provides a variety of premium slewing bearings up to 20 feet. Our slewing bearings are light in weight, strong in loading capacity, and can be applied in broad applications.

WJB slewing bearings include triple-row roller type, single-row four-point contact ball type, single-row cross roller type, double-row balls with the same diameter type, double-row balls with different diameter type, and balls-rollers combined type.

They are widely applied in wind power energy, ship crane, port door machines, circular storage/reclaimer, tower crane, mobile crane, excavator, environmental protection water treatment equipment, and more.
