

SLEWING BEARINGS

WJB provides a variety of high-quality Slewing Bearings with outer diameters from 12 inches (1 ft) to 432 inches (36 ft). They are designed to have high axial and moment load ratings but are light in weight.

WJB'S Slewing Bearings are available in various internal designs and external configurations:

- With Internal Gear or External Gear Teeth
- Non-hardened and Hardened Gear Teeth
- Single-Row 4pt-Contact Ball Bearing
- Double-Row Ball Bearing with a different Pitch Diameter
- Single-Row Cross Roller Bearing
- Roller and Ball Bearing
- Triple-Row Roller Bearing

WJB's Slewing Bearings are used in various applications such as Construction/Mining, Oil & Gas, Wind Power, Cranes, Port Door Machines, Circular Storage/Reclaimers, Excavators, Tunnel Borings, Waste Water Treatment Equipment, and more.
