

CYLINDRICAL ROLLER BEARINGS

WJB produces cylindrical roller bearings in many designs, dimension series and sizes. In bearings of this type, cylindrical rollers are in linear contact with the raceways. WJB can also design a so-called logarithmic profile or other crown profile on the roller and raceway, providing an optimum stress distribution in the contact zones in the bearing. Our bearings are widely used in industrial gear boxes, oilfield equipment, wind power energy, steel and rolling mill, corrugators, mining and quarrying.
